

# Global Benchmark at Hannanprint Victoria

The Goss M600 press has earned a worldwide reputation for proven print quality and reliability and now we will have one of our very own installed at Hannanprint Victoria.

Designed for a wide range of commercial or publication applications, this 16 page quarto web press sets the benchmark for web offset printing worldwide.

And no wonder, with enhancements such as an Ecocool dryer, Technotrans Spinclean D, Innotech 4P/8P cover production system with sheeter allowing production of full sheets, half sheets and gatefold products in a single stream, with all of the latest QuadTech quality controls. Hannanprint Victoria is buzzing with excitement!

In addition to opening new markets, the M600 will enhance the library of formats available to our clients and will provide speed, efficiency and consistency gains over and above that of our current press offerings.

With the installment being ably project managed by Andrew Orum and the team at Hannanprint Victoria, we look forward to seeing ink brought to life on paper by the end of March 2006.
