

NEW DIMENSIONS IN PRINT TECHNOLOGY (AND IN PRESS DESIGN) AT CRAFT INPRINT

Craft Inprint are very excited to announce the impending arrival of their new baby at the Craft Inprint Brisbane plant.

With the Speedmaster XL 105, Craft Inprint can provide clients access to a category of printing press that is setting standards for the future of the entire print media industry.

The innovative Speedmaster XL 105 makes Craft Inprint even better equipped to tackle headlong the ever rising future challenges in offset printing.

Consistently designed for a maximum production-run speed of 18,000 sheets per hour in the 75 x 105 format, the fully automated Speedmaster XL 105 is the ideal production press for the long print run label and packaging sector as well as for the highly industrialised commercial print.

From the feeder to the delivery, the Speedmaster XL 105 has been designed to print even better, even faster, and with even greater productivity – enabling Craft Inprint to meet the increasing demands of its customers with even more success.

The outstanding design of this new press has not gone unnoticed in the industry on a worldwide scale. The Speedmaster XL 105 received a prestigious award for outstanding product and communication designs: the silver Design Award of the Federal Republic of Germany.

No other design award subjects the participants to such a severe exam. It therefore thoroughly deserves the accolade of "Number One Award" in Design.

Furthermore, the Speedmaster XL 105 has received design awards in Germany, USA and Japan, confirming the industrial design of the press on an international level.

The most important award, however, is the enthusiasm of Craft Inprint customers and staff for the new Speedmaster XL 105.

The Speedmaster XL 105 will be the largest sheetfed press in Brisbane and the only press in Australia to feature full feeder and delivery pile logistics with auto pallet change at both ends of the press.
